

Aardvark & Monitor software setup procedure.

1. Unzip the files to any folder or directory on a Windows based PC.
2. Before you get started: YOU MUST LOGIN AS A LOCAL (ADMIN)INSTRATOR USER.
It will not install properly if you are not the Local Administrator because the installer package needs to create a folder on the root drive.
3. Double **click on the xxxx.MSI file** to start the installer and answer any setup questions.
 - The xxxx is the installer file name with revision number. (xxxx.rev.msi)
4. If the installer complains it needs the .NET 3.5 framework, please adjust the Windows settings per these instructions: <https://docs.microsoft.com/en-us/dotnet/framework/install/dotnet-35-windows-10>
 - See below, we've included the highlights of this webpage.

Enable the .NET Framework 3.5 in Control Panel

You can enable the .NET Framework 3.5 through the Windows Control Panel. This option may require an Internet connection.

1. Press the Windows key  on your keyboard, type "Windows Features", and press Enter. The **Turn Windows features on or off** dialog box appears.
2. Select the **.NET Framework 3.5 (includes .NET 2.0 and 3.0)** check box, select **OK**, and reboot your computer if prompted.
3. You don't need to select the child items for **Windows Communication Foundation (WCF) HTTP Activation** and **Windows Communication Foundation (WCF) Non-HTTP Activation**.
